Every company and the people behind it, always current, one search away. Starting with Romania.

Every time a bank lends, an insurer underwrites or a supplier bids for a public contract, the same questions decide the outcome: who really owns this company, who runs it, and what public money has it won? Across the EU those answers are public, but scattered across datasets that were never built to connect. We built the engine that connects them, and we started with Romania: one record per company, refreshed twice a week, with the source and date on every fact. SICAP.pro is already proving it with paying customers. Harta Firmelor is where we take it to scale.

ONE DATA ENGINE

Seven official sources, extracted by our code and matched to one record per company and per person.

4.1M	100M+	39M	8.9M	5.5M
companies since 1990	linked records, 7 sources	public contracts and purchases	Gazette notices	court cases

The market is European. Financial institutions in Europe, the Middle East and Africa spend about **USD 85 billion** a year on financial-crime compliance, Europe's company-data providers bill about **EUR 3 billion** a year, and the EU's 250,000 public authorities award about **EUR 2.6 trillion** in contracts. Romania, one of 27 member states, is EUR 11 million of that data revenue and EUR 20 billion of those contracts.

Harta Firmelor

Launched 30 Aug 2026

1,900+	700	60%	50,000+
phone-verified accounts	visitors a day, on average	of accounts came back	distinct profiles viewed

What it is. Profiles for all 4.1M companies: registered owners and directors over time, financials, court cases and public contracts, on a map. Contracts are linked to a company's owners and to their owners, with the penalties public buyers have recorded against each supplier; local bureaus stop at the shareholders. Every profile is open to anyone. An AI analyst, in closed beta, answers questions in plain language with its sources.

Who uses it. A government financial intelligence unit, investigative journalists who have published investigations based on it, and the leading business press, which has covered it.

Who will pay. Data feeds for banks, insurers and compliance teams; we are in talks with an insurance group and a bank. Alerts for SMEs and law firms, plus API and AI-agent access, start in Q4 2026.

SICAP.pro

Launched 28 Feb 2025

EUR 1,100+	80+	2.6×
monthly recurring revenue (MRR)	paying customers	MRR growth over 12 months

What it is. Search and alerts across public tenders and contracts: who buys, who wins and who competes. AI writes and sorts the alerts, so each bidder sees the tenders that fit.

Who pays. Bidders, by subscription, mostly on annual plans. We are in talks with a bank to offer winning bidders financing inside the product.

HOW THE TWO FIT TOGETHER

SICAP.pro is the procurement side of the engine: every tender, every contract, every winner, sold to bidders by subscription. Harta Firmelor is the company side: for each of those winners, and for every other company, the owners, directors, court cases and financials, open to anyone and sold as data feeds, alerts and API access. One extraction, one matching and one refresh feed both: a contract found in SICAP.pro is the same contract on the company's profile in Harta Firmelor.

FOUNDERS

Alexandru Angelescu CEO

10 years as a public-procurement consultant and data analyst. Co-created SICAP.pro and leads its product. Conceived Harta Firmelor and worked out how its seven sources link together.

Radu Ciocan CTO

London-based AI engineer, 25 years of building software. Founded SICAP.ai in 2020, co-created SICAP.pro, built Harta Firmelor and the engine behind both. Also builds agentic systems for OLAF, the European Anti-Fraud Office.

Buyers are active in company data. Wiener Börse agreed to buy 80% of North Data (2026), nCino bought FullCircl for USD 135 million (2024), Clearlake took Dun & Bradstreet private for USD 7.7 billion including debt (2025), and Moody's bought kompany (2022).

THE ROUND

We are preparing our pre-seed for the end of the year.

It will fund sales and marketing, expansion into other EU countries, our own AI infrastructure and more engineers.

Alexandru Angelescu, CEO
